SHERLOCK

Sherlock Data Warehouse

NASA Ames, USRA/Crown/FRA, SGT/ATAC

June 2018

SHERLOCK

National Aeronautics and
Space Administration

Objectives

- Introduce Sherlock to those who are new to it
- Show you Sherlock 2.0: new features to get you to the to core of your analysis
- Gather your ideas on future enhancements

National Aeronautics and
Space Administration

Outline

- Sherlock Overview
- Current Web Interface and Data Sources
- ATAC End-to-End Flight Data
- ATAC Reports and Aggregated Reports
- Big Data System
- Example Uses of Sherlock for Analysis
- Semantic Graph Database
- Resources/Backup

National Aeronautics and
Space Administration

Sherlock Overview

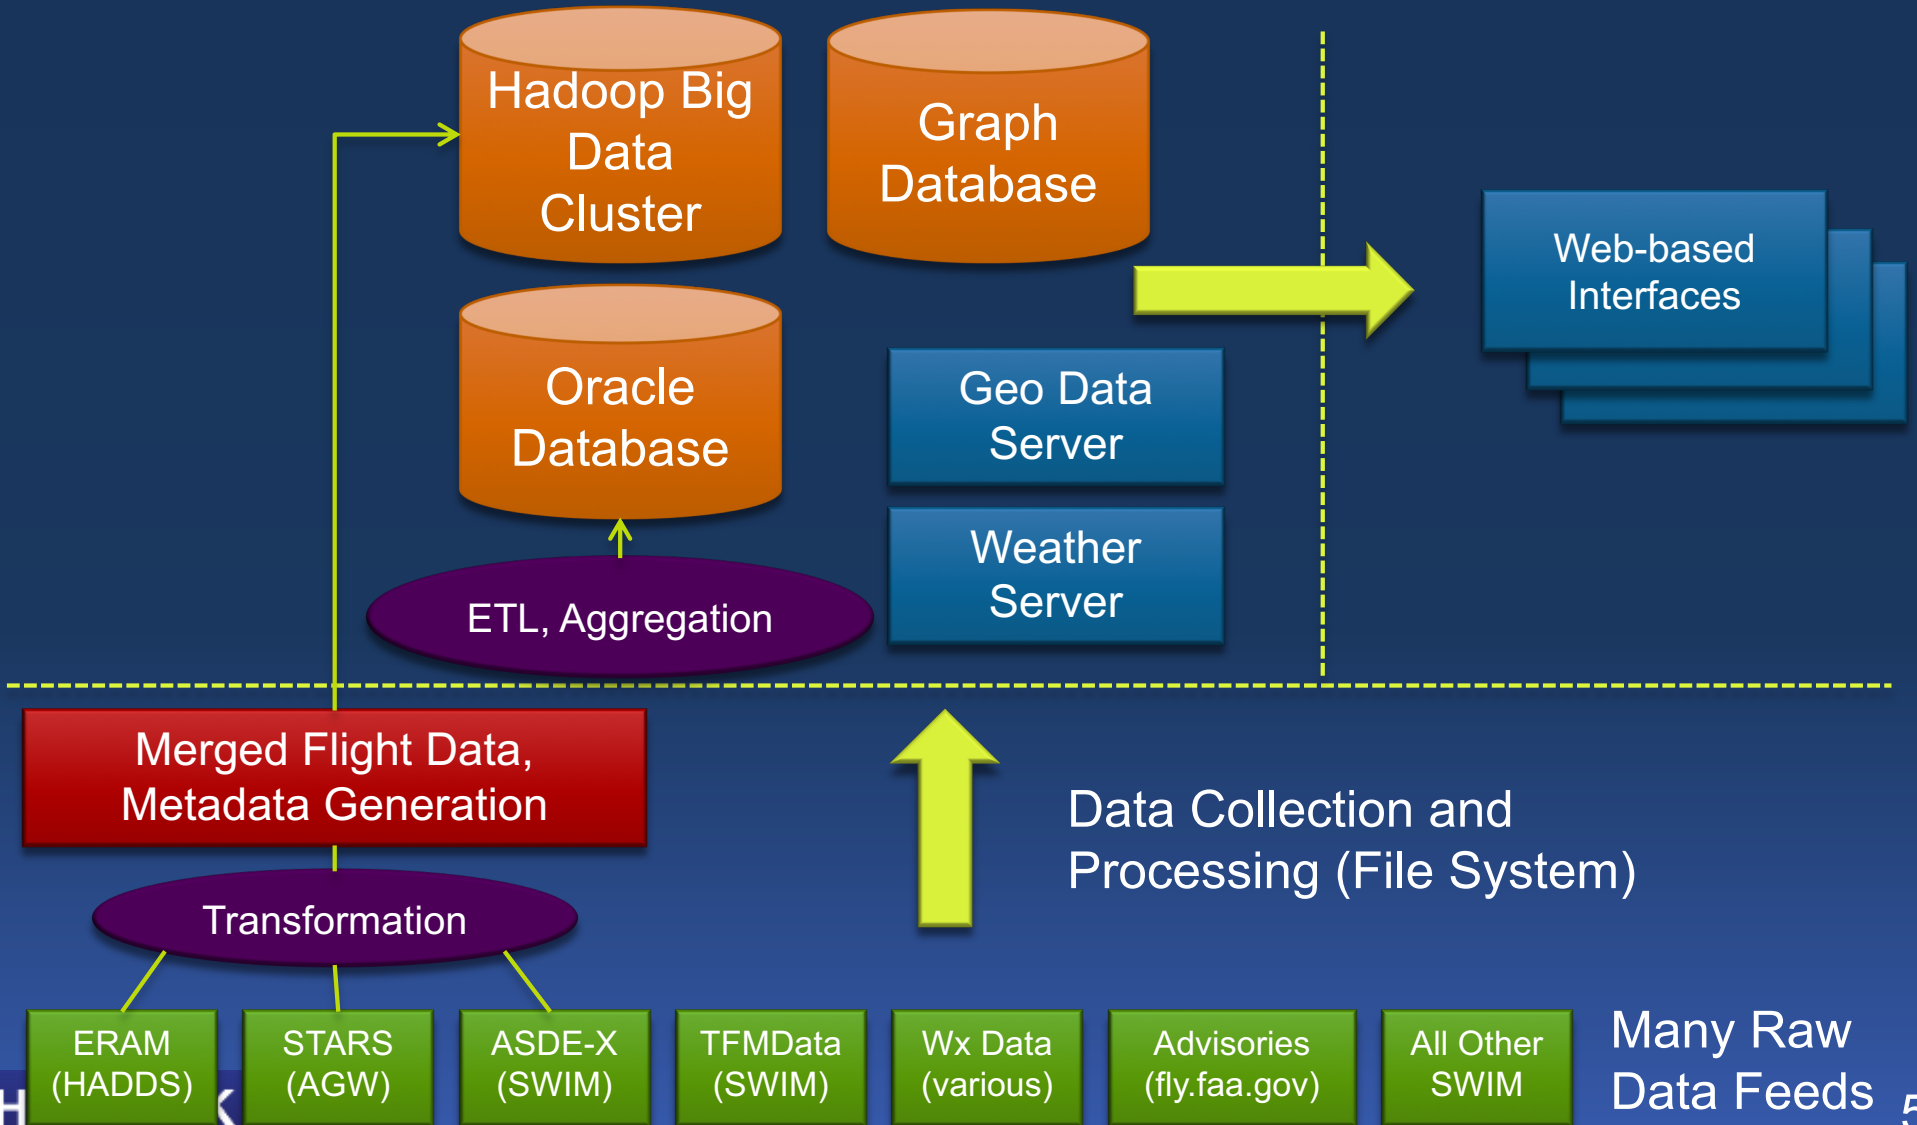

- NASA has access to many ATM flight, weather, and traffic flow-related data sources
- Real data drives all of NASA's ATM R&D
- Sherlock is a platform for reliable ATM data collection, archiving, processing, query, and delivery
- Sherlock is a platform for big data analytics, including data mining and machine learning
- Sherlock also has a semantic data store aimed at enabling more complex data integration

National Aeronautics and
Space Administration

Simplified Sherlock Architecture

National Aeronautics and
Space Administration

Major Sherlock Functions

- Search and Download of raw data – e.g., access to data collected from original sources and written to file system. Ex: FAA SWIM, NOAA Weather
- Browse, Query Download parsed sources such as METAR, or derived data, such as WITI
- Big Data server supporting analytics of track and weather data on Hadoop platform
- Graph database supporting complex queries across heterogeneous data sources
- Geospatial server to query and visualize airspace elements (routes, fixes, boundaries, etc.)
- Weather server to query and visualize weather

National Aeronautics and
Space Administration

Recent Enhancements – Sherlock 2.0

- Addition of all available FAA SWIM data feeds
 - SWIM is FAA's new way of distributing NAS data
 - All feeds are in XML format, but no two feeds use same schema. (Center schema not same as TRACON)
- Addition of ATAC processed flight data
 - All data in same, consistent format (csv records)
 - Data stored by facility (TRACON/Surface facilities paired)
 - Data also merged into end-to-end flight records over entire US National Airspace
- Addition of ATAC reports
 - Daily reports based on flight data, FAA advisories, etc.
- Advances in Big Data system (Cloudera Hadoop)
 - ATAC data being loaded into HDFS cluster daily
 - SMARTNAS API to big data
 - Used for NRA research

National Aeronautics and
Space Administration

FAA SWIM Data Sources on Sherlock

- Flight Data:
 - STDDS/ASDE-X: Surface data
 - TAIS: TRACON data, including VFR flights
 - SFDPS: Center data from ERAM
 - TFMDData: NAS-wide flight data, flow constraints
 - TBFM: Operational metering data
- Airport Data:
 - ADPS: Airport Data Service, Runway Visual Range info
 - NOTAM: Notices to Airmen
- Weather Data:
 - ITWS: terminal convective weather
- SWIM Schema Info

National Aeronautics and
Space Administration

Other Raw Data on Sherlock

- Weather:
 - CIWS convective forecasts
 - METAR airport current surface weather conditions
 - NOAA Rapid Refresh (RR) forecasts
- Flight Data:
 - CTAS text-based format, in Center/TRACON pairs
- Stored but no longer updated (obsolete):
 - NOAA RUC forecasts
 - ASDI flight data

National Aeronautics and
Space Administration

Processed Data on Sherlock

- OPSNET Stats
- ATCSCC Strategic Advisories
- METAR Airport Weather Reports
- TAF Weather Forecasts
- PIREP Pilot Reports
- WITI Weather Impact Analysis by day, Center, and Sector (computed by Sherlock)
- CCFP Simplified Weather Polygons

National Aeronautics and
Space Administration

New Processed Data from ATAC

- Collected for 76 FAA facilities. Per-facility data available next day. Merged USA data available within 7 days. Consistent format
- Flight Data
 - IFF: Flight Plan and Track data
 - EV: Flight Event Data
 - RD: Flight Summary Data
- Reports (to be discussed later)
 - Go Arouns
 - Turn to Final
 - Runway Usage
 - Taxi Time
 - Field 10 Reroutes
 - Center Instantaneous Counts
 - Sector Statistics
 - Sector Activity
 - Best Flight Plan

National Aeronautics and
Space Administration

ATAC Flight Data

- IFF: Integrated Flight Format
- Includes all source data plus derived fields
- Record types include Flight Summary (2), Track Point (3), Flight Plan (4):
 - Summary: Time, Key, Beacon, Source, AC ID, AC Type, Orig, Dest, Ops Type
 - Track: Time, Key, Beacon, Source, AC ID, Lat, Long, Alt, Accuracy, Ground Speed, Course, Rate of Climb, Facility, Mode S, etc.
 - Plan: Time, Key, Beacon, Source, AC ID, AC Type, Orig, Dest, Altitude info, Route, ETA, Flight Cat, Perf Cat, Ops Type, Equipage, Coord Time, etc.
- Complete IFF Specification

National Aeronautics and
Space Administration

Ames
Discovery • Innovations • Solutions

Flight Data Availability

STARS –available from 9/1/2015

ERAM –available from 10/1/2015

ARTS –available from 11/1/2015

ASDE-X –available from 1/16/2016

National Aeronautics and
Space Administration

Merged USA Track Data, Plans, Metadata – CLT Query

End to End (N2N) – available from 1/16/2016

National Aeronautics and
Space Administration

ATAC Summary Data

- RD: Reduced Data summary, one record per flight
- In USA merged, departure and arrival fields are populated
- Fields: Key, Track Start, Track End, Duration, AC ID, AC Type, Beacon, Ops Type, Airline, Carrier Type, Origin, Destination, Takeoff Runway, Landing Runway, Top of Climb, Top of Descent, Takeoff Time, Landing Time, Route, Traversed: Centers, TRACONS, Sectors, and SUAs, etc.
- Complete RD Specification

National Aeronautics and
Space Administration

ATAC Reports in Sherlock

- Performance Reports – available daily for individual facilities
- Terminal (STARS, ARTS)
 - Go around reports
 - Counts, runways, altitude, return time
 - Turn-to-Final
 - Overshoots, glideslope speed/altitude deviations, turn on angle
- Surface (ASDE-X, ASSC)
 - Runway Usage
 - Runway throughput, arrival/departure rates
 - Taxi – time
 - Taxi out, taxi in time
- En-route (ERAM)
 - Instantaneous Counts Reports (static and dynamic)
 - Sector Stats (static and dynamic)
 - Reroutes
 - Sector Activity
- NAS – wide
 - Best Flight Plan (Synthesized)
 - CCFP Sector Coverage
 - CWAM Sector Coverage

Facility Reports

- ☐ Go Arouns
- ☐ Turns To Final
- ☐ Runway Usage(ASDEX)
- ☐ Taxi Time(ASDEX)
- ☐ Instantaneous Counts
- ☐ Sector Stats
- ☐ Field10 Reroute
- ☐ Sector Activity

National Aeronautics and
Space Administration

ATAC Aggregated Databases

- Aggregated Trend Databases – Updated Daily
 - En-route
 - Sector Activity
 - Reroutes
 - Sector Stats
 - Instantaneous Counts
 - Terminal
 - Go arounds
 - Turn to Final
 - Surface
 - Runway Usage
 - Taxi Time
 - NAS Wide
 - Best Flight Plan
- Data sets Aggregated Monthly
 - CCFP Sector Coverage
 - CWAM Sector Coverage

National Aeronautics and
Space Administration

Summary: ATAC Processing

Number	Description
8	Dedicated Processing Machines
76	ATC Facilities collected/processed daily
39,000+	Analysis ready facility-days processed
116,000+	Number of performance reports generated to date
40-50 million	Number of track points in a 24-hour set of end-to-end data
infinite	Thanks to NASA and contractor IT/Lab Staff that made this possible

National Aeronautics and
Space Administration

What is a Hadoop Big Data System?

- Hadoop is an open-source software framework for storing data and running applications on clusters of commodity hardware. It provides massive storage for any kind of data, enormous processing power and the ability to handle virtually limitless concurrent tasks or jobs.
- Many resources to learn Hadoop. Recommend Coursera series from UC San Diego:
<https://www.coursera.org/specializations/big-data>

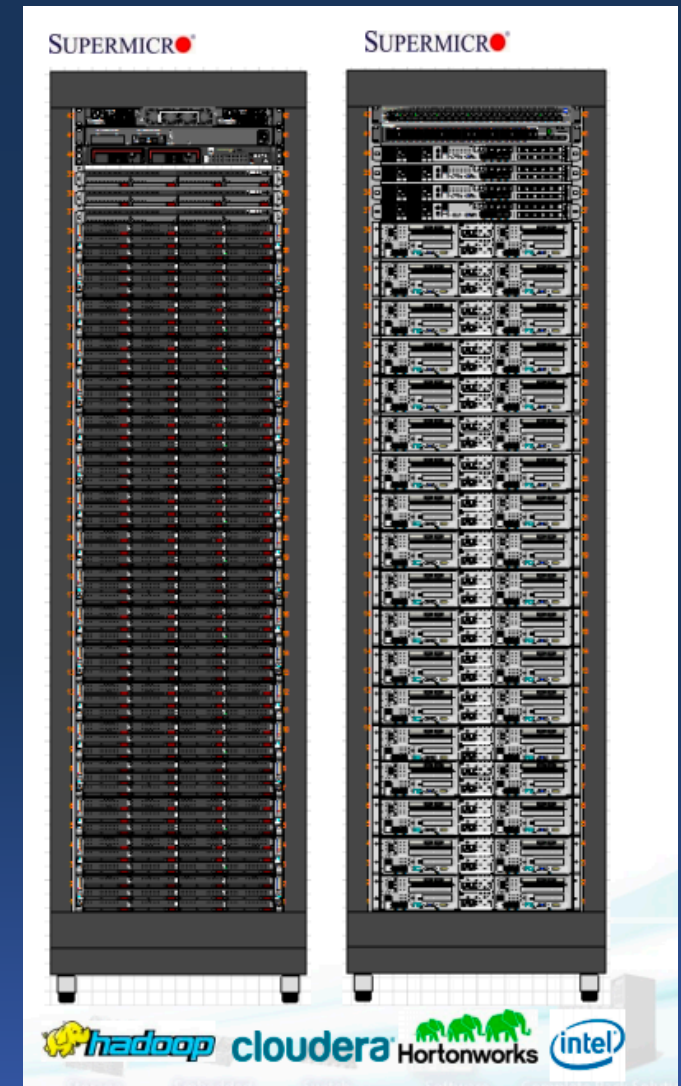

National Aeronautics and
Space Administration

Sherlock Big Data System

- SuperMicro Engineered System
- Cloudera Hadoop software
- 42U rack
- Total of 576 CPU Cores, 800 TB Storage
- 1 Management Node
- 3 Name Nodes (Dual 8 Core, 512 GB RAM each)
- 32 Data Nodes (Dual 8 Core, 256 GB RAM each)

National Aeronautics and
Space Administration

Big Data Status

- Cloudera stack installed and running; data imported daily
- User interface is here:
<http://sherlock.arc.nasa.gov:8889/home>
- Send email to sysadmin@osprey if you would like to try it out
 - Requires NextGen ATM account;
- HDFS data: populated with facility and USA flight data (IFF, EV, RD)
- HBASE data: populated with USA flight data (IFF, EV, RD) and facility data for sectorization
- We are looking for use cases to know what else to store there

National Aeronautics and
Space Administration

Fast Paced Simulation Validation and Post Analysis Process

Application: Playback of simulated vs actual operations data to support simulation validation

Data Used: Sherlock end-to-end trajectory data, SOSS simulation output data

- Convert simulation output data into ATAC/ Sherlock ASDE-X track data formats
- Develop new/ reuse existing Sherlock reports for creating a validation and post-analysis dashboard
- Playback capability to compare simulated flights with real flights

Historical Departure Operations Characterization

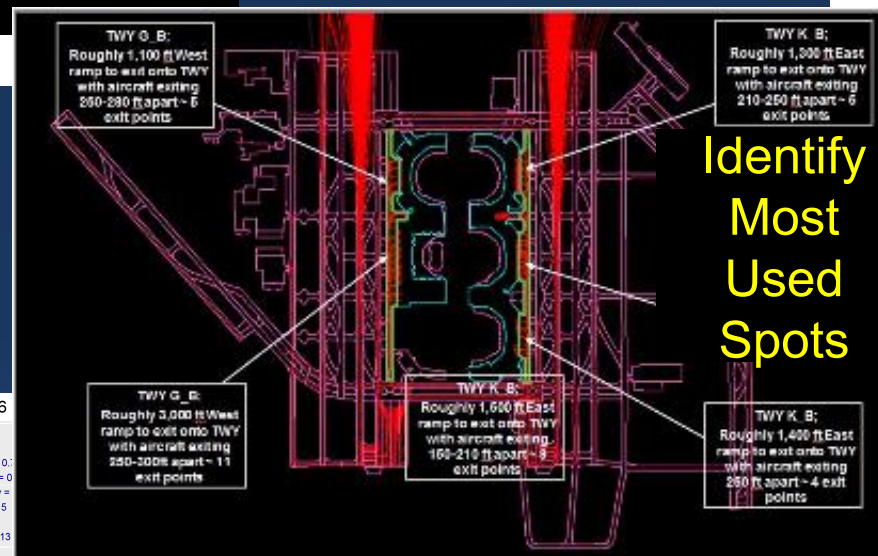

Taxi Time
Variability by Spot

Application: Characterization of departure operations at study metroplex sites

Data Used: Sherlock end-to-end trajectory data, airport layout definitions, Airspace fix definitions

Departure Fix Sharing

CIWS data

National Aeronautics and
Space Administration

Big Data Applications – ATAC Research

- Geospatial Computations on a large scale
 - Comparing CWAM polygons to end-to-end trajectory data
- Complex Search
 - Using SparkSQL, Apache Hive, MongoDB and other technologies to query years of operational data for specific NAS occurrences
- Real time analytics for RSSA use case
 - Detecting potential CWAM polygon proximity for NAS traffic in real time

National Aeronautics and
Space Administration

Big Data Analytics for Aeronautics

- Visualization of all ~40 million reported track points
- Frequent approach paths visible

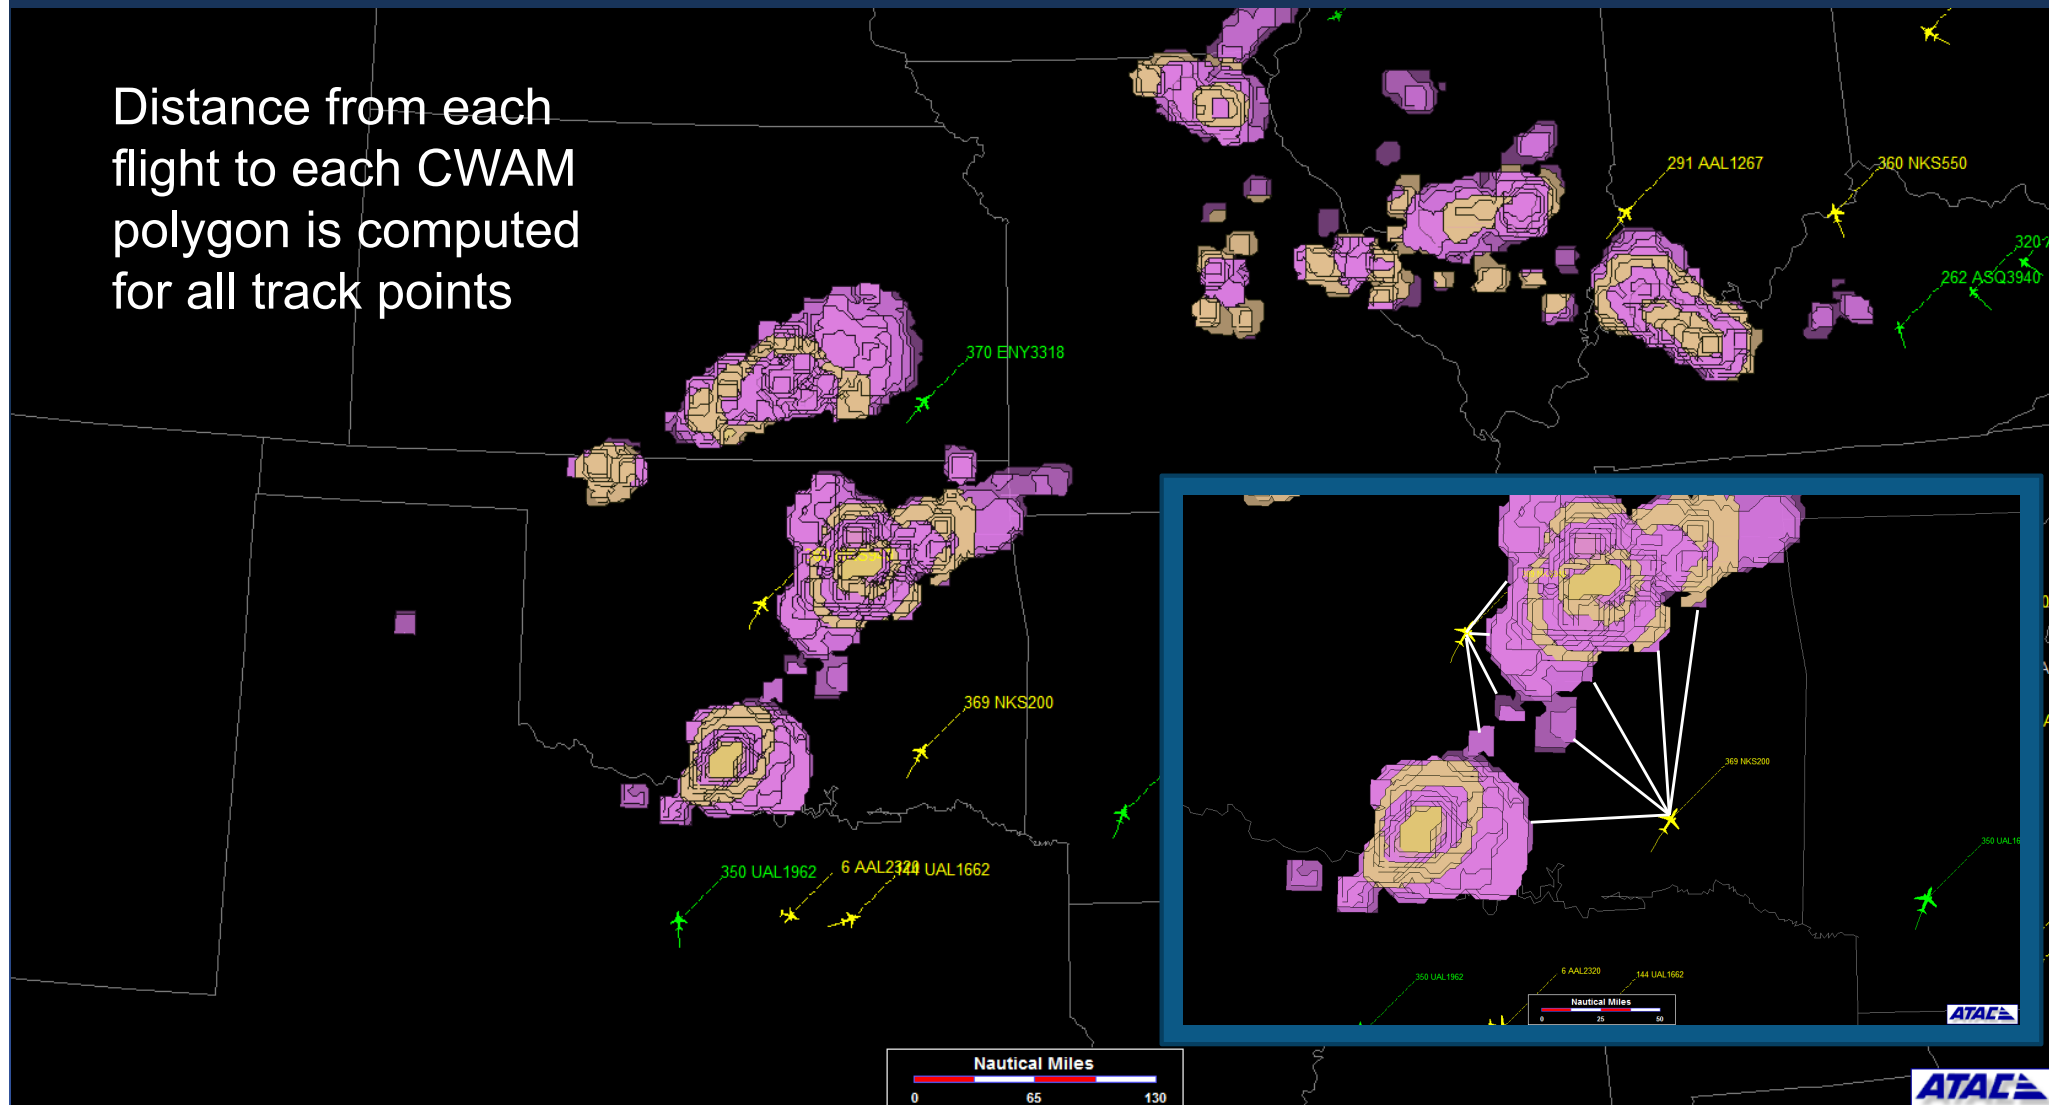

National Aeronautics and
Space Administration

Large Scale Geospatial Computation

Distance from each
flight to each CWAM
polygon is computed
for all track points

National Aeronautics and
Space Administration

ATAC Next Steps

■ Underway

- Historical Data Processing – En-route, Terminal data sets back to 1/1/2014
- Additional Wx coverage and sector metrics for TBO project
- Adding aggregated data to Oracle
- Continued Big Data applications

■ Wish List

- VFR Flight Processing
- Real-time data merging
- Additional performance reports
- Other?

National Aeronautics and
Space Administration

Semantic Graph Database

- Dr. Rich Keller, Code TI

National Aeronautics and
Space Administration

Wouldn't it be nice...

- To be able to query across *all* of the data sources in Sherlock to answer questions that cut across multiple kinds of data? (Not just the flight data...)
- To save much of the time and energy spent writing custom code to integrate data from multiple Sherlock datasets?

National Aeronautics and
Space Administration

What are the challenges?

- Sherlock-housed datasets are very heterogeneous
 - data formats
 - field names
 - scientific units
 - spatial/temporal alignment
- Sherlock is a patchwork quilt
 - contains raw data files and structured Oracle & HBase tables
 - lacks field standardization across tables, making joins difficult
 - missing adaptation info. necessary to connect data tables

Result: Can only query within isolated 'data islands';
can't bridge across data sources without great effort

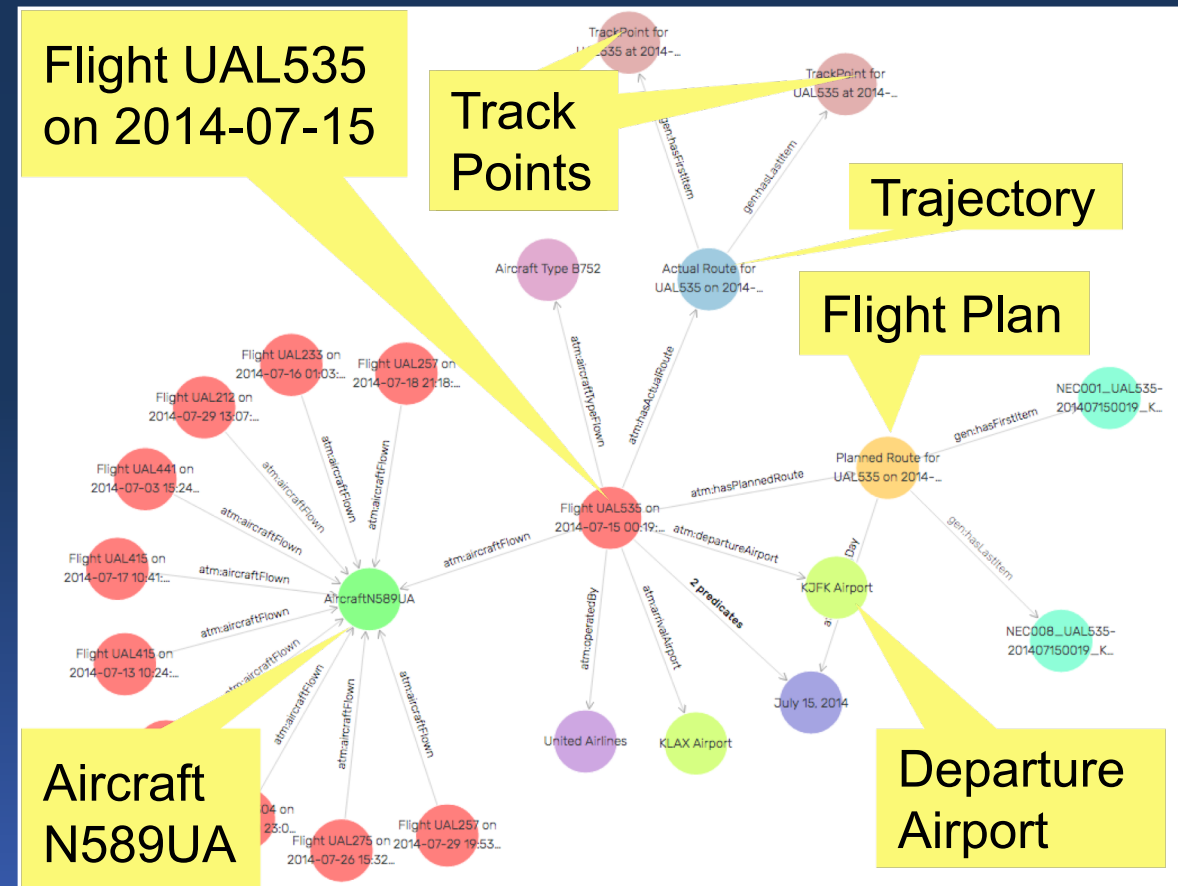

National Aeronautics and
Space Administration

Integrated Graph Database

- Highly-interconnected, network-structured info. store, where:
 - Nodes represent airspace entities and their properties
 - Links represent relationships
- Integrates all types of data within a single queryable structure
 - Flight track
 - Airport
 - Weather
 - Advisory
 - Aeronautical info.

National Aeronautics and
Space Administration

Goal: Enable Cross-cutting Queries and data export capabilities

- Examples:
 - Find Delta flights using A319s departing ZNY airports in rain & heavy winds
 - Identify all sectors within which any A320 aircraft is currently operating in US airspace
 - During December 2014, locate all UAL flights that were rerouted due to weather, after departing ORD under freezing ground temperatures after ground delays of over 60 minutes.

National Aeronautics and
Space Administration

Results to Date

- Evaluated feasibility of graph database approach 👍
- Designed an extensive graph data schema (an 'ontology')
- Acquired data from 8 heterogeneous data sources focusing on flight operations in the NY Metroplex (3 largest airports in NY area) during July 2014
- Loaded 100K flights into graph database (>38M nodes!)
- Designed and executed ~25 cross-cutting queries (with help of active AF and TI researchers) to support ongoing research
- Compared two different graph database products and measured query performance in a benchmarking exercise

National Aeronautics and
Space Administration
